Skalen

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy, color = class))
```

A scatter plot showing the relationship between engine displacement (displ) on the x-axis and highway mileage (hwy) on the y-axis. The x-axis ranges from approximately 1.6 to 7.0, and the y-axis ranges from 12 to 45, with values increasing from bottom to top. The plot is divided into seven color-coded regions representing different car classes: 2seater (light red), compact (yellow), midsize (green), minivan (teal), pickup (blue), subcompact (purple), and suv (pink). The data points show a general trend where higher engine displacement leads to lower highway mileage, with some overlap between classes. The 'subcompact' class is clustered at low displacement and high mileage, while the '2seater' class is clustered at high displacement and low mileage.

Use with most aesthetics

Use same arguments as `scale_x_date()`.
See `?strptime` for label formats.

Use with x or y aesthetics (x shown here)
